## **Japan Earthquake: Current Supply Status**

Alpha and Omega Semiconductor is in the process of contacting and assessing the status of our suppliers who have either manufacturing sites in Japan or raw materials provided from Japan. To date, the responses have been generally positive and there is no indication that our ability to deliver product will be impacted.

AOS' internal assembly manufacturing sites are located in China, and support more than 98% of our product portfolio. The total supply chain of our assembly manufacturing is located outside of Japan, and has not had any interruptions due to the earthquake. AOS' major wafer foundries have published their current status with no sign of interruption.

AOS is grateful that our staff in Japan have reported in safe, and extends well wishes to the people and nation of Japan to overcome this disaster.

AOS will continue to provide service and support as usual to our customers through the coming weeks.
