PRODUCT CHANGE NOTIFICATION

Please be informed that Kingbright's SMD-LED KA-3020/KA-3020A series will move to EOL (end of life) status due to obsolete tooling. Kingbright will offer the new KA-3021 series for new project at the same price level as KA-3020 series. For existing projects we will continue to support the KA-3020/KA-3020A series until the end of April 2010.

For new projects only the new KA-3021 series should be used!

Kingbright's new KA-3021 series has the same recommended soldering pattern as KA-3020 series. Customers can replace our KA-3020 series directly with the new KA-3021 series without changing design.

The appearances of KA-3020/KA-3020A and the new KA-3021:

The new KA-3021 series has the same dimensions of 3,0 mm x 2,0 mm, but the package is 0,1 mm thinner than KA-3020/KA-3020A series. The new KA-3021 series has slightly larger window than KA-3020/KA-3020A series for better light-extraction efficiency.

We will send you spec sheets and samples of the new KA-3021 series upon request.

Best regards

Udo Reinhold

Managing Director
